

AN OPPORTUNITY TOO GOOD TO MISS

DTM Print has launched the world's smallest LED dry toner colour label printer, opening up this market to more companies than ever before.

A new, extremely compact, yet high quality label printer is now available from DTM Print, making this growing market accessible to many more print companies.

The DTM CX86e colour tag printer, is said to be the world's smallest LED dry toner colour label printer and it helps companies produce versatile and professional colour labels and tags.

Whether they are vouchers, coupons, value added receipts, ID tags with photos, visitor badges, price and promotion stickers, pasted labels, sleeves, loop ribbons or labels for cardboards and boxes – with the DTM CX86e high quality full colour prints can be produced within seconds.

The CX86e uses the latest digital LED technology. During the electrophotographic LED printing process the image is developed on a light sensitive drum, then it is transferred by electrostatic charge via an image transfer belt and fused by heat to the media. The labels produced that way are pin sharp, waterproof and UV resistant.

ROBUST AND RELIABLE

'As LED printheads have no moving parts, unlike the classic laser technology, significantly less raw materials are consumed in the manufacturing process, and a space saving design and a significantly longer service life are achieved. With a size of 198 x 195 x 380 mm (w x h x d) and a weight of 9.5 kg, the CX86e is more compact, robust and reliable than other printers in its class,' explained Andreas Hoffmann, managing director of DTM Print. 'This means it can be used almost anywhere and is easy to transport.' Special attention was paid to simple operation. All you need to do is change a three colour toner cartridge that guarantees thousands of prints. This eliminates the need to stock individual toner cartridges and the device is ready to use again in just a few seconds. Further

components of the printer such as drum unit, transfer belt and fuser have been designed for a long service life with more than 100,000 prints and can also be replaced by the user in a few seconds. The external material feed of dry toner approved labels and tags are possible via roll, continuous feed paper in zigzag folding or single sheet.

Single sheets must have a size of 25 to 86 mm in width and 53 to 551 mm in length. DTM Print provides a wide selection of certified Genuine Label Stock for dry toner: starting with matte and glossy papers extending to transparent, matte and glossy polyester films as well as textured, silver, gold or other coloured materials.

The built-in rotary cutter enables the production of labels with a length of 53 to 551 mm. Optionally, the printer can be retrofitted with a presenter module. Here a label is printed, the printer waits until it has been peeled off before printing the next label.

POWERFUL AND COST EFFECTIVE

'With the DTM CX86e, we are offering companies a powerful and cost effective printer to achieve maximum advertising impact with their produced labels and tags, to attract the customers' attention and to ensure higher sales,' added Andreas.

The DTM CX86e is easy to set up and operate. The package includes the printer driver for Windows 7/10 and the design software NiceLabel Free 2019 DTM Edition (for Windows) for simple creations of label designs. For data

import and variable data printing, the full version is needed. The printer can also be used with other popular label design software such as BarTender and graphic software such as Adobe Illustrator and other Windows applications.

And, you can embrace the new prospects offered by the printer for only €2195 (MSRP)! Now that sounds like an opportunity too good to miss. **PS.**
