

# Designed with quality, built for speed

**DTM's CX86e Colour Tag Printer is the ultimate fast, compact printing solution for production, POS and POI applications**

**T**he DTM CX86e is the world's smallest LED label printer and helps companies to produce versatile and professional colour labels and tags that maximize advertising impact. Whether they are vouchers, coupons, value-added receipts, ID tags with photos, visitor badges, price and promotion stickers, pasted labels, sleeves, loop ribbons or labels for cardboards and boxes, the DTM CX86e makes it fast and easy to print high-quality full-colour labels and tags for signage and product identification that will attract customer attention and increase sales.

DTM CX86e uses the latest digital LED technology. During the electrophotographic LED printing process the image is developed on a light sensitive drum, then it's transferred by electrostatic charge via an image transfer belt and fused by heat to the media. The labels produced that way are pin sharp, waterproof and UV-resistant.

"As LED print heads have no moving parts, unlike the classic laser technology, significantly less raw materials are consumed in the manufacturing process, and a space-saving design and a significantly longer service life are achieved. With a size of 198x195x380 mm (WxHxD) and a weight of 9.5 kg, the CX86e is more compact, robust and reliable than other printers in its class," explains Andreas Hoffmann, Managing Director of DTM Print. "This means it can be used almost anywhere and is easy to transport."

Special attention was paid to simple operation. All you need to do is change a three-colour toner cartridge that guarantees thousands of prints. This eliminates the need to stock individual toner cartridges and the device is ready to use again in just a few seconds.

Further components of the printer such as

drum unit, transfer belt and fuser have been designed for a long service life with more than 100,000 prints and can also be replaced by the user in a few seconds.

With a wide range of interfaces such as USB, Ethernet, WLAN (optional) and control interfaces, the CX86e can be used as a stand-alone unit, in a network or in an automated environment without any problems.

The external material feed of dry toner approved labels and tags are possible via roll, continuous feed paper in zigzag folding or single sheet. Single sheets must have a size of 25 - 86 mm in width and 53 - 551 mm in length. DTM Print provides a wide selection of DTM certified Genuine Label Stock for dry toner: starting with matte and glossy papers extending to transparent, matte and glossy polyester films as well as textured, silver, gold or other coloured materials.

The built-in rotary cutter enables the production of labels with a length of 53 - 551 mm. Optionally, the printer can be retrofitted with a presenter module. Here a label is printed, the printer waits until it has been peeled off before printing the next label.

DTM CX86e is easy to set-up and operate.

The delivery includes the printer driver for Windows 7/10 and the design software NiceLabel® Free 2019 DTM Edition (for Windows) for simple creations of label designs. For data import and variable data printing the full version is needed. The printer can also be used with other popular label design software such as BarTender and graphic software such as Adobe Illustrator and other Windows applications.

"With the CX86e, we are offering companies a powerful and cost-effective printer to achieve maximum advertising impact with their produced labels and tags, to attract the customers' attention and to ensure higher sales," says Andreas Hoffmann, summarizing the advantages of the DTM CX86e.
